The lewelCPM project sime to develop a da	ta-driven Customer Pelationship	

The JewelCRM project aims to develop a data-driven Customer Relationship Management (CRM) system specifically tailored for jewelry businesses. With the growing demand for personalization, automation, and customer insight in luxury retail, this system offers a scalable, intelligent, and user-centric solution to transform raw sales and customer data into actionable insights.

By leveraging customer data, historical transactions, and behavioral patterns, the CRM system classifies and segments customers, enabling personalized marketing, improved service, and inventory alignment. The final solution includes a web-based interface where jewelry retailers can view detailed customer profiles, buying history, special occasion reminders, and predictive recommendations in real-time.

Objectives

To centralize and classify customer and sales data for jewelry businesses.

To implement intelligent data processing and analytics for actionable insights.

To design a user-friendly CRM interface with features tailored to jewelers with features tailored to jewelers.

To support sales teams, managers, and marketers in enhancing customer engagement and loyalty.

Would you like this adapted into a presentation slide, Word doc, or Miro board format for team sharing?
